monicapabin@gmail.com, (514) 582-6945

Canadian address:

3563 rue Durocher, Apt. 9
Montreal, Quebec H2X 2E7, Canada

American address:

22 Grand Ave
Cedar Knolls, NJ 07927, USA

OBJECTIVE

I am a motivated programmer seeking to gain more experience in a professional setting, eager to learn from those who are in the industry. I am looking for an internship for the summer of 2015, but am flexible and willing to work into or during fall 2015.

EDUCATION

Pursuing Bachelor of Software Engineering
McGill University, Montreal, Quebec, Canada
Expected graduation date: April 29, 2016

September 2011 – Present

SKILLS

Operating Systems: Windows XP/Vista/7, Linux (Ubuntu)

Languages/Frameworks (in order of familiarity): Java, Python (Django), C#, C, Javascript, HTML, PHP, CSS, PhoneGap, Google App Engine

Applications: Microsoft Word, Powerpoint, and Excel; Eclipse; Photoshop; Aptana; Unity

Other: GitHub (mpabin)

WORK EXPERIENCE

MTelegence - Developer Internship

May 2014 – August 2014

- Languages worked with: Javascript, PHP, HTML, CSS
- I worked on a product called Readorium, which aims to improve critical reading skills in children. I improved the user interface, specifically the way information is communicated to teachers about their students' progress, by getting feedback from teachers and applying that feedback. This meant making changes to the user interface, as well as implementing a graphing system to display information about students' progress in a more readable manner.

PROJECTS

Various Games

February 2014 – present

- I have made various games using Unity, all showcased at mpabin.github.io. Two of them (Flag It! and The Last Fry) have been showcased at the Mont Royal Game Society (MRGS) meetings, receiving very positive feedback.

Do The Thing! (3 team members) - Game Jam entry**January 2015**

- Do The Thing! was a game made during the 2015 Global Game Jam, which is an annual 48 hour jam that happens all around the world, and whose theme this year was "What do we do now?". I participated in the Montreal event, dubbed "Montreal Game Jam". Do The Thing! was directly inspired by the theme. It is a local cooperative multiplayer game where players try to beat as many minigames as they can before they run out of hit points. The minigames are presented with minimal instructions, giving the players a chance to figure out what to do. The game was selected as a judges' pick at the Montreal event. The game was made in Unity 2D, using C#.

Paint-submission Website - personal project**August 2013**

- Languages worked with: Python (Django), Javascript, HTML, CSS
- After using Django in a school project and internship, I wanted to acquaint myself with it better. I used it to create a website that allows a user to draw on a canvas and submit the drawing to a gallery where it is displayed. I also implemented a user registration system.

Design Principles and Methods (5 team members) - school project**September - December 2013**

- Languages worked with: Java (LeJOS library)
- Working with a Lego Mindstorms kit, my team and I built and programmed robots to complete various tasks such as wall-following, path-finding, and object avoidance. In the end, we integrated all these components into a single robot that could retrieve and deliver a block without hitting obstacles. Heavy documentation was done during the entire process.

Pixel Art Bot - personal project**March 2014**

- Languages worked with: Python (Google App Engine, tweepy, PIL)
- I created a Twitter bot that tweets randomly generated pixel art every few hours and replies to any tweet directed at it with a randomly generated image using the message given to it as a seed. It is deployed on Google App Engine. You can see it in action by visiting its profile at @pixelbotart on Twitter and tweeting at it.

GAME JAMS & HACKATHONS

- **Global Game Jam** (January 2015) - Won judges' pick for a game called Do The Thing (see above).
- **DatGam X** (October 2014) - Created a game called The Last Fry, a local multiplayer versus game where players fight to control and consume a french fry. Made with Unity 2D, using C#.
- **1 Button Jam** (August 2014)- A 24 hour jam where the constraint was to make a game that used one button, and one button only. Created a game called DuckSort, which came in 2nd place.
- **McGill's McHacks Hackathon** (February 2014) - Created Stamp Out! prototype (see above).
- **Toronto Hackathon** (May 2013) - Created a messaging app for Android that connected people in the area who were also using the same app. Made using PhoneGap.
- **McGill University's CodeJam** (November 2012) - A 48 hour coding competition where over 50 teams were assigned a stock exchange problem to optimize.
